NEW INTRODUCTIONS FOR 1955

We are proud to co-introduce with Windridge Farm of Battle Creek, Michigan:

Tall Bearded

GAY INTRIGUE (Streibich '55) Tall.....\$15.00

This is the first tall bearded introduction of Mr. and Mrs. Charles Streibich; a plicata of good size and with form, substance and branching better than many of the plicatas. The standards, which are closed and domed, are heavily marked deep bright purple on a white base, while the gracefully flaring falls are only lightly edged with the same color, being the most concentrated at the haft. Even the purple style arms add to the charm, while the bright orange beard enlivens the entire flower. The bloom stalks are tall and well branched and the flowers are in good proportion to the height.

Dwarf

WEE TURQUE (Streibich '55) 4 1/2".....\$3.00

This dwarf of pure pumila parentage is a color we have not seen before in the dwarfs. The great amount of green along the midrib and at the haft gives a turquoise effect, hence the name. The standards, closed and of good form, are in this turquoise color, and the falls are of a soft grape coloring. The falls tuck at the very tip but are wide and broad. The heavy beard is white and the flower has ample pollen. A two year clump of Wee Turque is a solid mass of bloom, resembling a corsage.

We also are proud that we have been chosen by Mr. Kensell Williams of Reno, Nevada to introduce this fine iris, which has been rated the best of the new deeper blues by several judges:

Tall Bearded

ABBIE COLLET (K. Williams '55) M. 32".....\$10.00

Blue irises are always great favorites in the garden, and this large, fluted, flaring very blue pure self, with slight intensification in falls will be, we believe, one of the highlights in our garden this season. The blooms, which are open 3 to 4 days, are unusually iridescent, with extremely heavy substance like crisp leather, and are completely weather resistant, having withstood both hail and high winds. The stalks are very stout and straight, with flowers well spaced on beautifully balanced branches. Plants are large and vigorous, with stiff and upright foliage. The very rich, deep coloring of this fine flower, together with all the other qualities of a top ranking iris, make it one of the most impressive for the front of the border.

We wish again to thank our many friends and customers for their patronage and kindness in recommending us to others.

Sincerely,
WILLIAM and HELEN DIEHL

Quarterly Bulletins — Annual Dues \$4.00

PLANTING INSTRUCTIONS: Iris rhizomes should be planted in a sunny, well drained location where they will have at least a half day of sunshine. The roots should be spread and planted deeply and the rhizome itself should be planted about one-half inch below the surface of the soil. The soil should be kept moist until the plant is well established. Iris grow well in any type of soil. However, the addition of humus to very heavy soil is desirable. Bone meal may be worked into the soil before planting or used as a side dressing once a year. Since iris multiply rapidly, planting should be spaced from 12 to 18 inches apart to allow for proper ventilation. Your rhizomes should be planted as soon as possible after you receive them. If impossible to plant at once, unpack and keep in a dry, cool place.

HYBRIDIZERS' CHARTS

The importance of keeping good records has been stressed by all the successful hybridizers. In order to keep both accurate and permanent records on our own crosses we have compiled a hybridizer's chart, which we have found to be very satisfactory. This chart, which carries back for five generations, has spaces for the hybridizer's name, year of introduction, color of flower, color of beard, season of bloom, and notes on standards, falls, substance, stalk, etc. Additional notes may be kept on the reverse side of sheet. We are offering this chart in sets of 100 sheets—
